

# VoIP: Voice over Internet Protocol

**DAYSTAR**  
Computer Services

When it's time to update your systems....

**Go Digital!**

## Get More.... Pay Less!

Your business depends on communication to survive. The efficient use of a state-of-the-art communication system can add true value to your bottom line. However, for small and medium-sized businesses, access to such systems has traditionally been:

*too expensive* to maintain — *too complex* to install — *too convoluted* to use properly

**Not anymore.**

An authorized Allworx partner, Daystar provides powerful communications systems designed exclusively for organizations with 1-100 users. Take advantage of digital communication's many robust features without breaking the bank.

**Price** — **Functionality** — **Flexibility**

### *How does it work?*

By converting your voice into digital signals, VoIP, or Voice over Internet Protocol, enables you to make telephone calls over the Internet instead of a regular telephone line. Integrating your voice and data networks reduces both capital and ongoing operating costs. In addition, VoIP services offer advanced features that enhance your business' communication system and improve productivity.

### *The Allworx communication solution provided by Daystar*

Coupling an Allworx feature-rich IP phone system with a robust data network system substantially improves business productivity at the lowest installed cost of any VoIP system. A truly scalable solution, Allworx systems are designed with multiple built-in connections for traditional phone lines, T1/PR1 circuit for voice and Ethernet or T1 for ISP data service, allowing you to mix and match only those features that work for you.
